

**BEDROCK**  
concrete construction specialists

# Company Profile

Bedrock Group specialises in concrete construction.

# National Services

Bedrock operates throughout South Africa with International Project acquisition on the rise.

# About Bedrock

In 2013, Greg Kitching and Chris James formed Bedrock Group in partnership with 30 years combined experience in civil engineering and the construction industry.

The company specialises in the manufacture and installation of site-cast tilt-up walls, columns and large pre-cast concrete elements and structures while also offering crane hire and rigging and lifting expertise.

Our experienced team of professionals, managers and construction teams have worked extensively together, delivering quality concrete products to a wide range of clients.

Bedrock Group offers integrity, quality and a great inter-personal relationship from start to finish.

# Key Personnel

Managing Director, Operational Director and General Manager.

**RIGGING**

The background image shows the skeletal frame of a large industrial building under construction. The structure is composed of numerous vertical columns and horizontal beams, creating a complex geometric pattern. The columns are notably tapered. The scene is captured at sunset or sunrise, with the sun low on the right horizon, casting a warm, orange glow across the sky and silhouetting the building's framework. In the distance, a range of low hills is visible under the hazy sky. A semi-transparent dark grey box is overlaid on the lower-left portion of the image, containing the text.

# Site-Cast

Site-cast construction is an innovative technology, only offered by a handful of construction companies in South Africa. This method is also known as tilt-up construction whereby large scale wall panels or columns are tilted into place by a heavy lift crane.

Bedrock's signature tapered columns are shown here.

# Pre-Cast

Pre-cast construction is a very versatile form of concrete construction where small or large scale structures are cast at our yard and then transported to site for installation.

# Marine

Bedrock Group brings pre-cast and site-cast construction as well as heavy lifting and rigging to your Marine projects.

# Columns | Beams | Slabs

Turn Key columns provide support for beams and slabs or additional support for steel roofing structure.

# Full Concrete Structural Frame

These usually include concrete columns, roof beams and wall panels.

# Signature & Architectural Features

Bedrock's services are not limited to conventional construct, Bedrock's signature tapered columns have become widely known.

# Crane Hire

The Bedrock crane truck and 60T cranes, plus rigging equipment and trained operators are available for hire.

# Rigging

Bedrock has a team of highly trained and skilled riggers and operators who can perform specialised heavy lifts of large panels and elements.

# Plant

The Bedrock Plant was born as the site-cast and pre-cast businesses began to acquire larger inventories of plant and machinery. This plant and machinery is now available to not only our sister companies but to you and your projects too.

# Hardware

As Bedrock expanded it grew necessary to develop our own hardware to keep up with demand. Our hardware will soon become available to the public for purchase.

- 
- An aerial photograph showing a large, long warehouse under construction. The building has a long, low profile with a series of gabled roof sections. The roof is mostly covered with grey corrugated metal panels, but some sections are still under construction, showing the internal steel framework. The building is situated in a flat, cleared area of reddish-brown earth. In the background, there are rolling green hills with patches of trees and a winding road. The sky is overcast with grey clouds.
